Sacred Heart University, Jack Welch College of Business & Technology

Bachelor's of Science, *Information Technology*

Fairfield, CT

May 2025

RELEVANT EXPERIENCE

Confluence Streaming

Lead Data Engineer

Fairfield, CT

Sept. 2025 - Dec. 2025

- Architected a full-stack platform which combines multiple third-party services into a unified interface featuring a custom cable-style tv scheduling engine
- Utilized JavaScript to build backend business logic and data pipelines, created database schema and connected API services utilizing low cost web service resources

Forkkast Foods

Founder & Full-Stack Engineer

Bridgeport, CT

July 2025 - Present

- Developing a full-stack meal prep scheduling web application, featuring a user-friendly interface, secure Supabase authentication, and robust data management to simplify weekly meal planning by improving planning efficiency by 30%
- Utilizing TypeScript, TailwindCSS & React to create an efficient and user-friendly interface, JavaScript to create robust backend API services, PostgreSQL Database hosted through Supabase for secure data management
- Utilizing Jest & Vitest Frameworks for unit & integration testing for frontend UI interactions and backend api services to ensure smooth integration of modules before deployment and production

Park Perfect

Backend Engineer

Fairfield, CT

Jan. 2026 - May 2026

- Collaborated with 4 additional developers to create a full-stack parking web application for universities to manage their parking lot spaces for students & faculty
- Designed and implemented parking module business logic & services utilizing Python with Django web framework to create and integrate API services
- Utilized Pytest & Django Libraries to perform unit & integration testing on the parking modules to ensure a smooth transition of integration with other backend & frontend services
